

Catalog Audit Report

Prepared for: sample_catalog.csv · 16 rows analyzed · September 26, 2026

ROWS ANALYZED	FLAGGED FOR REVIEW	VERIFIED SAMPLE	ROOT CAUSES IDENTIFIED
16	6	3	3

Findings

CHECK	ITEMS	DESCRIPTION	STATUS
Duplicate Sku	MG-2001	SKU 'MG-2001' appears 2 times with titles: Ceramic Coffee Mug, Ceramic Coffee Mug - 12oz	● Flagged
Missing Price	BT-3001-L, NB-4001	2 row(s) missing 'price' — required for most channel feeds	● Flagged
Missing Category	NB-4001	1 row(s) missing 'category' — required for most channel feeds	● Flagged
Broken Variant	MG-2001	Product group 'MG' has 1 of 2 variants with a missing variant value	● Flagged
Broken Variant	NB-4001	Product group 'NB' has 1 of 2 variants with a missing variant value	● Flagged
Broken Variant	TS-1001-RED	Product group 'TS-1001' has 1 of 3 variants with a missing variant value	● Flagged
Clean Row	TS-1001-BLK	'TS-1001-BLK' passed all checks — no duplicate, complete fields, no title/variant conflicts	● Verified
Clean Row	TS-1001-WHT	'TS-1001-WHT' passed all checks — no duplicate, complete fields, no title/variant conflicts	● Verified
Clean Row	TS-1002-BLK	'TS-1002-BLK' passed all checks — no duplicate, complete fields, no title/variant conflicts	● Verified

Root Causes

Duplicate Entries (1 related findings)

Duplicate SKUs usually mean the same product was created more than once — often because two systems (e.g. a POS and an online store) both generate product IDs independently, with nothing reconciling them.

Missing Fields (2 related findings)

Missing required fields typically happen when a product is created quickly (a bulk import, a rushed listing) and the required-fields check for that channel isn't enforced at creation time — the gap only surfaces later, at the point of failed import or listing rejection.

Variant Logic (3 related findings)

Broken variant groups usually happen when new options (a new size or color) are added to some listings but not propagated consistently to every channel or every related SKU in the group.

This audit uses deterministic, rule-based checks. Every finding above traces to a specific, explainable rule — nothing is silently inferred. Items not flagged were checked and passed, not skipped.
